UKG

Integration Hub

## Connect your preferred business tools to UKG Ready® quickly and securely.

Accurate and up-to-date information is essential to running any business, so it's critical to harmonize data so you can confidently make the best decisions to help your organization thrive. However, one size does not fit all when it comes to connecting and syncing data across the different solutions you may be using to run your business, regardless of if they're in the cloud or not. UKG Ready® Integration Hub provides you with the flexibility to securely get data wherever it needs to go quickly and easily.

Flexible Connections

Here are the different ways you can get information where you need it to go:

- **Single direction file feeds** allow you to push information out of UKG Ready or pull it in from other business tools, such as finance and accounting solutions like QuickBooks, expense tracking solutions like Emburse, or Customer Relationship Management (CRM) solutions like Salesforce, and more.
- **Bi-directional file feeds** are great to keep information flowing between UKG Ready and other business tools you may be working with, such as project tracking solutions like Sage or job posting solutions like Indeed.
- **UKG APIs** can help you connect UKG Ready with even the most niche modern apps, keeping workflows across your solutions intact. Our API library is also available so you can build out APIs on your own if you have a tech savvy team.

Not quite sure which one of these is right for you? No problem! Our team will help you understand which makes the most sense based on the data that you want to move.
